

Think Data, Think Artha.

CASE STUDY

Data Governance

Optimizing Data Governance for a Leading Financial Services Provider

A top multi-finance company in Indonesia faced challenges in data quality, governance, and operational efficiency, impacting risk assessment, fraud detection, and regulatory compliance. To overcome these challenges, the company partnered with Artha Solutions to implement a comprehensive Data Governance framework, enabling real-time data integration, predictive analytics, and streamlined decision-making.

Outcomes

99.5%

Data Accuracy – Improved validation, monitoring, loan risk assessments, and compliance reporting.

30%

Fraud Reduction – AI-powered detection identified high-risk transactions faster, minimizing financial losses.

Increased Compliance Efficiency

Standardized governance ensured audit-ready data for regulators.

40%

Faster Reporting – Automated workflows reduced manual tasks, speeding up decisions and regulatory submissions.

35%

Faster Loan Processing – Predictive analytics enhanced NPL identification and optimized credit approvals.

Challenges

Disconnected Data Systems & Inconsistent Governance

Fragmented data silos and outdated governance practices caused inconsistent reporting, hindering risk analysis, compliance efforts, and predictive analytics for loan risks.

Fraud Detection & Risk Management Constraints

Inconsistent data structures created gaps in fraud detection and credit risk analysis, while the lack of predictive models delayed early Non-Performing Loans identification.

Operational Inefficiencies & Reporting Delays

Manual processes delayed report generation, affecting decision-making and regulatory filings, while lack of standardized governance hindered collaboration between business and IT teams.

Solutions Provided

Predictive Analytics for Risk & Compliance

Developed AI-driven models for loan default prediction and fraud detection, enhancing risk mitigation and enabling automated credit risk assessments, reducing loan processing times.

Enterprise-Wide Data Governance Framework

Established a Data Governance Office (DGO) to oversee data quality, compliance, and planning, developing SOPs for data ownership, access, and regulatory alignment.

Training & Change Management

Conducted enterprise-wide training on data governance principles, implementing a structured governance workflow to enhance collaboration between business and IT stakeholders.

Real-Time Data Integration & Quality Management

Implemented Talend middleware for real-time dataflow across risk, treasury, and collections systems, while standardizing metadata management to improve data reliability and integrity.
