

Think Data, Think Artha.

CASE STUDY

Talend & AWS Integration

Transforming E-commerce: Revolutionizing Integration and Efficiency

Artha Solutions transformed an e-commerce company's operations by integrating its applications with payment gateways, shipping carriers, and core order processing systems. Utilizing Talend and AWS technologies, Artha helped streamline workflows, optimize inventory management, and improve customer satisfaction through personalized experiences, fostering significant business growth.

Outcomes

20%

Cut labour costs by 20% while sustaining high productivity.

15%

Improved customer satisfaction scores by 15%

25%

leading to a 25% reduction in returns

Challenges

Lack of integration between payment gateways, shipping carriers, and order processing systems.

Disconnected order processing, fulfillment, and retail POS systems.

Manual workflows lead to inventory errors and shipment inaccuracies.

Solutions Provided

Talend ESB Integration Architecture

Developed and implemented an integration architecture using Talend ESB to connect payment gateways and shipping carriers with order processing systems.

Talend MDM - Unified Retail Systems

Centralized and synchronized order processing, fulfillment, and retail POS systems through Talend MDM.

Automated Inventory & Order Management

Automated inventory synchronization and order management processes to minimize manual intervention and errors.

Advanced Analytics on AWS

Deployed AWS Cloud Data Lake for advanced analytics and personalized customer experiences.

Enhanced Delivery Accuracy

Integrated postal code and address validation to enhance delivery accuracy.
