

Think Data, Think Artha.

## CASE STUDY

### Master Data Management

## Digital Transformation for Unified Customer Data: Success with MDM

A leading multi-finance firm in Indonesia, specializing in vehicle and gadget financing, faced challenges with fragmented data and legacy systems. Partnering with Artha Solutions, they implemented a robust MDM via the DIP, enhancing data management, customer engagement, and operational efficiency, setting the stage for growth in a fast-paced industry.

### Outcomes

# 80%

The MDM solution cut manual onboarding by 80%, accelerating processes and improving service delivery and customer satisfaction.

# 98%

The MDM solution standardized 98% of data, enabling accurate insights and personalized offerings.

# 360°

A 360-degree customer view enabled personalized services, growth opportunities, and improved cross-selling and upselling.

## Challenges

### Lack of System Integration

Poor system integration disrupted data flow across departments, causing inefficiencies and delays in customer onboarding and service delivery.

### Onboarding Challenges

Disconnected systems made customer onboarding challenging, with manual data verification causing delays and reducing operational efficiency.

### Disparate Customer Data

Fragmented customer data across systems prevented a unified view, hindering insights into customer needs and preferences.

### Data Integration and Golden Record Creation

Without a centralized data integration system, merging data to create comprehensive Golden Records was difficult, leading to inconsistent insights and less effective customer engagement.

## Solutions Provided

### Utilization of Existing MDM Solutions

Artha leveraged the Data Insights Platform (DIP) and MDM solution to unify customer data, enabling single-source management of all customer information, including guarantors and spouses.

### Development of a Comprehensive MDM Data Hub

Artha developed an MDM Data Hub with Match/Merge logic and a Single Customer View (SCV), creating Golden Records to enhance data accuracy and reduce redundancy.

### Integration with Existing Applications

Artha integrated the MDM Data Hub with existing systems via APIs, streamlining data flow, collaboration, and customer onboarding.

### Automation and Data Quality Management

Artha automated solutions to cleanse and standardize data, ensuring all customer records met industry standards for accuracy and compliance.
