

Transforming Data Governance for a Leading Financial Institution in Southeast Asia

A top multi-finance company in Southeast Asia faced challenges in data governance, quality management, and operational efficiency, impacting risk assessment, regulatory compliance, and business decision-making. To address these issues, the company partnered with Artha Solutions to establish a dedicated Data Governance Office (DGO), implement Master Data Management (MDM), and enhance data strategy alignment.

Outcomes

99.5%

Improved data validation and governance achieved 99.5% accuracy, reducing reporting errors and inconsistencies.

40%

Enhanced real-time analytics accelerated decision-making by 40%, improving business insights & risk management.

35%

Optimized credit risk assessments cut loan processing time by 35%, enhancing customer approvals.

50%

Standardized processes increased data governance efficiency by 50%, enhancing compliance & audit readiness.

20%

Accurate, high-quality data boosted business performance by 20%, improving strategic planning and competitiveness.

Challenges

Rapid Growth & System Complexity

Business expansion and advancements highlighted data management limitations, where disparate systems created data silos, leading to integration challenges and hindering enterprise-wide data consistency across multiple applications.

Data Governance Gaps & Poor Data Quality

Lack of structured data governance caused inconsistencies, reporting errors, and inefficiencies, while poor data quality hindered decision-making, compliance, and operational performance.

Competitive Market Pressures & Regulatory Compliance

The multi-finance sector demanded timely, accurate data for competitiveness, while compliance with financial regulations necessitated a centralized governance framework for audit-ready data.

Solutions Provided

Implementing Master Data Management (MDM)

An MDM framework was designed for managing master and reference data, empowering data owners to ensure data integrity, while demonstrating a working MDM model that enabled automated validation and governance.

Establishing a Data Governance Office (DGO)

A strategic governance framework was designed, encompassing SOPs, data stewardship roles, and compliance guidelines, alongside the development of CDO office guidelines focusing on People, Processes, and Technology.

Data Insights Platform for Governance Pilot

A pilot initiative for a Data Insights Platform was launched, enabling real-time analytics and governance tracking, which provided actionable insights that optimized debt recovery rates and loan processing efficiency.

Enhancing Data Quality & Metadata Management

Data quality assessments were conducted in risk, collections, treasury, and products, with immediate corrective actions implemented, alongside the development of a business glossary to standardize data terms, ensuring clarity and consistency across departments.
