

Think Data, Think Artha.

CASE STUDY

Dynamic Ingestion Framework

Revolutionizing Banking with Data Modernization

A leading Indonesian bank, partnered with Artha Solutions to embark on a transformative digital journey. The aim was to overcome fragmented data silos, enhance operational efficiency, and deliver a seamless, personalized customer experience in a fiercely competitive banking landscape.

Outcomes

5X

Increase in customer adoption of new products & services.

40%

Reduce maintenance and licensing costs by 40%.

50%

Time saved while running critical reports from the credit bureaus.

4X

Increase in performance due using Artha Dynamic Ingestion Framework.

Challenges

The bank faced significant obstacles, like:

Data Fragmentation

Data was dispersed across 10+ siloed data marts, leading to inconsistencies and inefficiencies.

Slow Reporting

Generating key reports took up to half a day, delaying critical decisions and actions.

Static Customer Engagement

Limited interactivity in digital channels restricted personalized customer communication and real-time offers.

Lack of Data Governance

Absence of standardized frameworks led to misaligned data handling and decision-making processes.

High Costs

High license costs due to legacy ETL systems spread across 4500 interfaces.

Solutions Provided

Advanced Data Platforms

Implemented Talend's big data platform to unify 40+ source systems into a centralized data lake.

Dynamic and Scalable Jobs

Deployed advanced solutions like Talend Data Catalog and Data Quality to standardize and secure data management.

Enhanced ETL Processes

Transformed static channels into dynamic platforms for personalized customer interactions and **"next-best offers."**

Optimized Data Integration

Adopted a hybrid microservices architecture for on-premises and cloud deployments, ensuring compliance with regulations and scalability.
