

Transforming Claims Management with Seamless System Migration

A leading health insurance provider struggled with inefficiencies in claims processing due to outdated systems, high rejection rates, and increasing regulatory compliance requirements. The company partnered with Artha Solutions to streamline claims management by integrating multiple data sources into a modernized claims system. This transformation resulted in faster processing times, reduced errors, and enhanced customer satisfaction.

Outcomes

95%

Reduced average claim processing time by 95%, improving provider reimbursement speeds.

72%

Automated validation processes led to a reduction of 72% ensuring smoother transactions.

50K+

Seamless transition enabled the reactivation of 50K+ healthcare providers within the new system.

\$4.2M

Improved efficiency and fraud detection saved the company \$4.2M per year in operational costs.

80%

Self-service options for policyholders, lead to higher customer satisfaction and loyalty.

Challenges

Legacy System Limitations

The existing claims processing system lacked automation, leading to high average processing time per claim, high claim rejection rate, increased operational costs and delayed reimbursements.

Compliance and Security Risks

Regulatory changes required adherence to EHNAC accreditation and compliance, which the legacy system struggled to meet.

Integration Gaps

Data from providers, pharmacy benefits managers, and care management systems were siloed, causing inconsistencies.

Solutions Provided

End-to-End System Integration

Consolidated data from key systems, including provider information, member CRM, Clearing House & Claims, pharmacy benefits, and member enrollment, into a unified claims platform.

Predictive Analytics Driven Claims Processing

Leveraged predictive analytics to identify potential claim rejections before submission, reducing the rejection rate to 3.5%.

Enhanced Compliance & Security Measures

Ensured compliance with EHNAC reducing regulatory penalties.
