

Transforming Healthcare Payment Transparency: A Quarterly EOB Implementation

Artha Solutions collaborated with a leading healthcare payer to revolutionize its Explanation of Benefits (EOB) process. By implementing a Quarterly EOB system, Artha used Talend and Facets to streamline operations, increase compliance, and improve transparency for beneficiaries. The transformation enabled seamless claims data consolidation, improved customer satisfaction, and optimized administrative efficiency, thus strengthening its reputation as a reliable and efficient service provider in the healthcare sector.

Outcomes

91%

Improvement in Customer satisfaction

80%

Improvement in claims data accuracy, reducing discrepancies and errors.

5X

Faster EOB compilation compared to the competition.

100%

Compliance with CMS EOB reporting standards.

Challenges

Data Accuracy Issues

Inconsistent patient information, incorrect service codes, and coverage mismatches led to confusion in EOB statements.

Ensuring Compliance with CMS Regulations

Each EOB needed to align with strict Centers for Medicare & Medicaid Services (CMS) reporting guidelines.

Integration of Data from Multiple Vendors

Variations in claims data formats from different third-party vendors resulted in processing delays.

Data Security & Privacy Risks

EOBs contain sensitive personal and medical data, requiring stringent protection against unauthorized access.

Solutions Provided

Automation and Centralization of EOB Data

Automated the ingestion and transformation of claims data from multiple sources into a standardized format along with the establishment of a centralized repository to store and track EOBs efficiently.

Error Resolution & Continuous Monitoring

Claim accuracy was ensured by resolving errors before EOB issuance, and EOB generation and distribution were made transparent through a real-time dashboard.

Data Standardization and Compliance

For regulatory compliance and data accuracy, claims data was standardized to CMS formats and an automated validation process was built to proactively identify discrepancies before EOB generation.

Enhanced Customer Communication & Transparency

To enhance policyholder clarity and reduce payer confusion, the system provided consolidated quarterly Explanation of Benefits (EOBs) summarizing all medical expenses over three months, featuring detailed breakdowns and easy-to-understand explanations.
