

Enhancing Risk Adjustment Revenue with Data-Driven Insights

A leading healthcare solutions provider struggled with optimizing risk adjustment revenue recovery. The organization faced challenges in ensuring accurate and complete submission of encounter and Chart Review Record (CRR) data while leveraging advanced analytics for better provider engagement. Partnering with Artha Solutions, they used Talend to streamline data processing, enhance risk adjustment strategies, and improve financial outcomes.

Outcomes

98%

Data Submission Accuracy: Artha's solutions improved data validation and submission accuracy to 98%, minimizing revenue leakage.

\$15M

Recovered Revenue: Automated data reconciliation enabled the recovery of \$15 million in potential lost risk adjustment revenue.

50%

Reduction in Processing Time: Optimized data workflows and enhanced analytics cut down manual processing time by 50%.

40%

Provider Engagement Increase: Improved provider notifications and reporting tools led to a 40% increase in provider participation.

Challenges

Unoptimized Risk Adjustment Data Submission

The organization struggled with incomplete or incorrect encounter and CRR data submissions, leading to potential revenue loss.

Limited Provider Engagement

Providers were not adequately informed about missing or incorrect risk adjustment data, impacting risk scoring accuracy.

Lack of Advanced Analytics & Reporting for Risk Management

The organization lacked real-time analytics and reporting tools to monitor performance and compliance effectively.

Data Quality and Integration Issues

Fragmented data sources and inconsistent reporting made it difficult to generate accurate risk adjustment insights.

Solutions Provided

Automated Data Ingestion & Processing

Implemented a robust data framework to improve submission accuracy, integrating with existing data feeds and external providers.

Seamless Data Integration & Crosswalk Mapping

Created a new crosswalk system to map unique member identifiers, ensuring consistency across multiple data sources.

Advanced Analytics for Risk Adjustment Optimization

Designed an analytics-driven risk adjustment module to track member conditions, predict high-risk cases, and improve forecasting accuracy.

Enhanced Provider Communication & Reporting

Developed automated notifications to alert providers about missing risk adjustment documentation, increasing engagement and compliance.
