

Think Data, Think Artha.

CASE STUDY

Enterprise Data Management (EDM)

Streamlining Healthcare Integration for a Leading Accountable Care Organization

A leading Accountable Care Organization (ACO) in Massachusetts partnered with Artha Solutions to implement an enterprise integration platform. The goal was to streamline member and provider data management, ensure compliance with Health Insurance Exchange (HIX) and Health Information Exchange (HIE) requirements, and enhance data accuracy for better decision-making.

Outcomes

99.8%

Data Accuracy: Implemented real-time validation, reducing member and provider data discrepancies.

100%

Compliance with HIX/HIE Requirements: Seamless integration ensured full regulatory adherence.

40%

Automated workflows sped enrolment, cutting processing time by 40%.

30%

Provider data sync boosted accuracy, reducing errors by 30%.

Challenges

HIX Compliance

Complex integration with Health Insurance Exchange (HIX) for member enrolment, eligibility verification, and premiums processing.

HIE Integration

Clinical data sharing required seamless interoperability across the Health Information Exchange (HIE) network.

Inaccurate Data Collection

Errors in data intake and processing caused inefficiencies in reporting and workflow actions.

Provider Data Integration

Transitioning to a new provider contract and credentialing system led to compatibility issues.

Data Synchronization Issues

Discrepancies between member and provider databases led to inaccurate records and reporting.

Solutions Provided

Standardized Data Architecture & Compliance

Developed a Service-Oriented Architecture (SOA) to create a unified data exchange framework, ensuring compliance with state and federal regulations through automated integration with HIX and HIE platforms.

Seamless Interoperability & Operational Efficiency

Automated real-time data synchronization across provider and clinical systems, while establishing a centralized data repository to reduce errors, enhance reporting, and improve decision-making.

Automated Data Management & Quality Control

Integrated the new provider credentialing system with member directories and care management solutions, while deploying an Enterprise Master Patient Index (EMPI) to establish a single source of truth for provider data.
