

Think Data, Think Artha.

CASE STUDY

Master Data Management

From Fragmented Data to Unified Insights

A global workwear brand faced challenges in unifying customer data across various systems. Artha Solutions helped improve customer experience and drive growth by implementing Talend MDM to create a single source of truth for consumer and customer information.

Outcomes

50K

Deduplicated 50,000 customer records within the first six hours.

65%

Real-time synchronization, allowed faster query resolution and more personalized service thus improving customer experience by 65%.

30%

Targeted offerings and upselling strategies that resulted in a 30% increase in revenue.

3 Months

One of the fastest MDM solution deployments in Talend's history.

Challenges

Data Fragmentation Across Channels

Inability to consolidate data from the company's point-of-sale (POS) system, SAP ERP, Salesforce CRM, and third-party sales platforms like Amazon and Bass Pro.

Lack of Real-Time Data Availability

Delay in data availability affected the company's ability to respond to real-time customer requests, such as modifying orders or resolving customer service queries promptly.

Inconsistent and Duplicated Data

Inconsistent, inaccurate, and duplicate customer records across its systems made it difficult to obtain a unified, 360-degree customer view.

Limited Customer Insights Hindering Growth

Inability to offer personalized promotions or cross-sell/upsell opportunities due to poor data integration.

Solutions Provided

Centralized Data Hub with Master Data Management

The deployment of a fast, on-premise Talend MDM solution, within a record 3-month implementation timeline, enabled the company to create a golden record for each customer by cleansing, deduplicating, and standardizing data across all systems.

Improved Data Quality and Governance

The use of Talend Data Quality, enabled the implementation of rigorous data quality measures, including deduplication and address validation rules. This improved the accuracy of customer information and reduced redundancy in the system.

Data Integration and Real-Time Synchronization

Integrated data from SAP, Salesforce, e-commerce channels, and Retail POS systems to create a unified and synchronized data source. This helped in modifying online orders and providing real-time updates to the CRM system.

Creation of a 360-Degree Customer View

Built a customer 360 view, enabling the company to deliver personalized promotions and improve customer targeting.
