

Providing improved lead generation service for car dealers offering fair car prices to the consumers

for an automotive classified website focused on the United States

Business Requirements

- The company captures, stores, and analyzes car purchase prices from across the United States.
- The information provided by the client should be transparent and available to all parties (consumers, dealers, and manufacturers).
- Analyzing data about the activity of car buyers and prospects on its website. With its big data architecture, it mines that data and then advise the car dealers over pricing and sales.

Result

- Implemented an Integrated Systems which contains the data of automotive pricing, website information for new and used car, Buyer information and Dealer information.
- Current process enhanced service and transparency at all levels - consumer, dealer, manufacturer.
- Effective and fast analyzing data about the activity of car buyers and prospects on the web.
