

Think Data, Think Artha.

CASE STUDY

SAP Data Modernization

Connected Enterprise, ERP Modernization and Enabling Data-driven Decision-Making

A leading construction and engineering company undertook a modernization of its enterprise applications to enhance data-driven decision-making. The initiative required real-time integration of enterprise systems and IoT data streams, the establishment of an enterprise data lake, and optimized cost alignment for improved profitability. Artha Solutions implemented a comprehensive solution leveraging AWS Cloud, Snowflake, and Talend, enabling SAP S/4HANA ERP modernization, streamlining operations, and driving enhanced business performance.

Outcomes

99% Accuracy

Achieved 99% accurate ERP integration, migrating 25 years of data within a year.

Steady Growth

Positioned a \$5B+ construction firm for data-driven growth with a connected enterprise platform.

Seamless Digital Transformation

Modernized enterprise with Talend, AWS, Snowflake, integrating SAP S/4HANA, JD Edwards, and Salesforce.

Challenges

Integrate enterprise applications with IoT feeds for real-time data, agile workforce, mobility, and informed decisions.

Enhance user experience and engagement while mitigating supply chain risks.

Develop a scalable Enterprise Data Lake with tiered data quality levels to support real-time analytics, predictions, and planning.

Optimize job cost management across the business lifecycle for improved efficiency and profitability

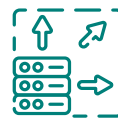

Solutions Provided

Enhanced Data Connectivity

Developed a robust integration platform using Talend for real-time orchestration across enterprise applications.

Scalable Data Infrastructure

Leveraged AWS Cloud and Snowflake for scalable data management, supporting 25 years of data and elastic expansion.

Unified Data Foundation

Created an enterprise data lake with multi-tiered data quality (Silver, Gold, Platinum) for real-time consumption and decision-making.

Modernized Data Integration

Replaced the older ESB system (MuleSoft) with Talend, enabling integration of both structured and unstructured data.
