Data Governance & Data Insights Platform

Transforming Real Estate Operations: A Data Governance Journey for a Singaporean Bank

Artha Solutions partnered with a leading Singaporean bank to transform its Commercial Real Estate unit. By addressing critical data challenges, Artha streamlined data processes, improved data quality, and established proactive data governance. This empowered the bank to make data-driven decisions and efficiently manage its global real estate portfolio with greater accuracy and efficiency.

Outcomes

35%

Achieved a 35% increase in data accuracy, reducing inconsistencies in real estate asset records.

40%

Improved data timeliness by 40%, ensuring up-to-date information across all properties.

85%

Automated data ingestion from 85% of third-party sources, minimizing dependency on manual inputs.

50%

Reduced data retrieval time by 50%, enabling quicker decision-making and analysis.

Challenges

Data Management Challenges

Handling unstructured data from various sources, lack of quality checks, and absence of a centralized repository leads to reactive problem-solving.

Historical Office Space Concerns

Addressing CEO concerns about employee office space shortages in quarterly town hall meetings before 2020.

Outcome Predictability Struggle

Ensuring predictable outcomes by effectively utilizing enterprise-wide collected data is a significant obstacle for the unit.

Scope of Commercial Real Estate Department

Managing the bank's global physical properties, including internal space, facilities, projects, portfolios, and employee experiences.

Solutions Provided

Identification and Standardization of Critical Data

Identified key data challenges, automated processes, and standardized data with a centralized business glossary for improved accuracy and efficiency.

Data Quality Enhancement and Governance Implementation

Implemented the Data Insights Platform to eliminate redundancy and enhance data quality while initiating active stewardship to ensure consistency, accuracy, and timeliness across systems.

Governance and Oversight for Sustainable Data Management

Established a data governance council and task force to oversee data incidents and manage new data requests efficiently.

Automation and Centralization of Data Processes

Automated legacy data pipelines to reduce manual processing from third-party vendors and disparate sources, while establishing a centralized data store with seamless connectivity to business intelligence tools for streamlined access.
