

Transforming Healthcare Data Management: Artha Dynamic Ingestion Framework

Artha Solutions partnered with a healthcare analytics leader to deploy Talend and Dynamic Ingestion Framework. This boosted real-time data flow, improved governance and analytics, and enhanced scalability and regulatory compliance. The provider's clients in pharma and healthcare now gain faster, more actionable insights for better decision-making.

Outcomes

5X

Increase in user scalability, allowing seamless data access across multiple teams.

50%

Reduction in data processing time, enabling faster and more accurate reporting.

150%

Improvement in productivity while maintaining the same operational costs.

100TB

Of data onboarded in just 3 months, significantly accelerating data availability.

35%

Enhancement in data accuracy, improving analytics reliability for pharmaceutical and biotech clients.

Challenges

As a leading healthcare analytics provider managing millions of electronic health records, healthcare claims, and client data, the firm faced several challenges:

Managing Massive Data Volumes

Handling 100+ TB of diverse data sources, requiring scalable infrastructure.

Complex Data Integration

Existing IT systems lacked the ability to support real-time ingestion and multi-source integration.

Regulatory and Market Pressures

Evolving compliance requirements, increasing competition, and shrinking budgets added operational complexities.

Solutions Provided

Advanced Data Cleansing and Governance

Implemented automated data validation, cleansing, and mapping using Talend's governance tools, ensuring regulatory compliance through real-time error tracking and reference data mapping.

Real-Time Analytics and Faster Insights

Utilized Talend's big data capabilities for real-time patient and market segmentation analytics, integrating Tableau for visualization to enable faster insights into patient journeys and market trends.

Optimized Data Usability and Accessibility

Standardized SQL-based data querying to enable analysts to efficiently work with large datasets while improving user accessibility across multiple business units, ensuring a single source of truth for data.

Scalable Cloud-Based Data Platform with DIF

Deployed a Dynamic Ingestion Framework using Talend and AWS to enable real-time data ingestion from multiple sources while leveraging Snowflake and Spark for high-performance cloud storage and processing.
