

Mastering Data for a Seamless Customer Experience

A global pizza giant, grappled with managing massive amounts of data from 85,000 sources. To gain deeper customer insights, boost store performance, and enhance customer engagement, Artha Solutions leveraged Talend Data Fabric to create an Enterprise Information Management Framework. This framework enabled real-time data integration, processing, and analytics for a 360-degree customer view for the organization.

Outcomes

99.9%

High-quality, enriched customer & operational data, with 99.9% accuracy.

50%

Achieved 50% faster data processing, enabling real-time decision-making for store performance and marketing.

30%

30% increased customer engagement, driving personalized marketing, conversions, and loyalty.

40%

Reduced IT costs by 40%, streamlining data architecture and minimizing manual processing.

Challenges

Fragmented Data Architecture

Lacked a standardized data ingestion framework, using multiple tools and custom development, leading to data inconsistencies and inefficiencies.

Siloed Customer & Store Data

The absence of a unified customer view made targeted marketing and store performance analysis difficult.

Data Quality & Governance Challenges

Need to standardize, clean, and enrich data from 85,000 sources, including point-of-sale systems, online orders, and third-party agencies.

Scalability & Performance Issues

Managing 17TB of data across multiple systems required real-time processing, as leads from online orders expired within seconds.

Lack of Real-Time Analytics

Business intelligence and advanced analytics were hindered by inefficient data processing, impacting operational forecasting, marketing campaigns, and logistics planning.

Solutions Provided

Enterprise Data Integration & Analytics Framework

Artha implemented Talend Data Fabric as its core data processing and integration platform, creating a unified Enterprise Information Management Framework.

Enhanced Customer Engagement & Business Intelligence

Integrated customer data from multiple sources, automated identity resolution with MDM, and enhanced personalized marketing and engagement using real-time analytics for a unified, data-driven approach.

Scalable, Real-Time Data Processing

Integrated 85,000 data sources, creating a real-time platform for data cleansing, enrichment, and scalable processing with Hadoop and MicroStrategy analytics.

Optimized Operational & Store Performance

Integrated real-time supply chain and store performance tracking across 26 supply chain centers, delivering data-driven insights for logistics optimization, demand forecasting, and financial planning.
