

Data Integrity Controls for NAIC/MAR Compliance

One of the largest customer-owned health insurer in the U.S., sought to enhance its data integrity framework. Partnering with Artha Solutions, it implemented a robust Data Integrity Controls framework to streamline compliance with NAIC (National Association of Insurance Commissioners) and MAR (Market Conduct Annual Statement) standards. The solution not only optimized operational efficiency but also reinforced the organization's commitment to data transparency, security, and superior customer service.

Outcomes

99%

Ensured regulatory compliance and increased policyholder trust through 99% accuracy in claims processing.

91%

Reduced manual errors and accelerated processing times using 91% automation in claims handling.

30%

Streamlined regulatory reporting and improved data governance brought 30% reduction in compliance auditing efforts.

40%

Reduced ETL implementation timelines by 40%, ensuring seamless data migration and validation.

Challenges

The insurer faced several data governance and integrity challenges.

Inconsistent Data Quality

Multiple frameworks across teams led to data inconsistencies, duplication, and incompleteness.

Integration Issues

Lack of interoperability with diverse enterprise tech stacks slowed down data processing and compliance efforts.

Complex Auditing Processes

The absence of a unified data governance framework made compliance audits cumbersome.

Scattered Knowledge Base

Teams struggled with a lack of centralized documentation, leading to inefficiencies in onboarding and issue resolution.

Solutions Provided

Enterprise-wide Data Integrity Framework

Established a single-point framework to manage data quality, eliminating redundancy and inconsistencies.

Automated Compliance Monitoring

Integrated audit controls to ensure data validation, reducing manual efforts in meeting NAIC/MAR compliance.

Seamless System Integration

Designed a loosely coupled framework to integrate with various third-party enterprise schedulers and cloud storage systems like Azure Synapse and Delta Lake.

Centralized Knowledge Base

Developed a comprehensive repository of FAQs, training materials, and QuickStart videos for seamless implementation and issue resolution.

Enhanced Data Governance

Enabled executive-level dashboards for real-time data quality monitoring and governance insights.
