

WHITE PAPER

Mirakl and Hybris Integration
in Power BI.

Our client, Henry Schein, Inc. is a solutions company for health care professionals powered by a network of people and technology. Henry Schein Business, Clinical, Technology, and Supply Chain solutions help office-based dental and medical practitioners work more efficiently so they can provide quality care more effectively. These solutions also support dental laboratories, government and institutional health care clinics, as well as other alternate care sites.

When a global enterprise acquired a new subsidiary that relied heavily on Excel for reporting, they faced challenges with data volume, inconsistency, and lack of visibility. As data complexity grew post-acquisition, the Excel-based process became error-prone and time-consuming. Artha was engaged to modernize their reporting stack—consolidating siloed data sources, enabling real-time dashboards, and delivering executive-ready insights.

Business Challenges

Data in Excel Sourcing

The client was manually collecting data from multiple platforms, including Mirakl and Hybris, and consolidating it into Excel spreadsheets for report creation and analysis. This process was time-consuming.

Data Siloing

Data from Mirakl and Hybris was housed in separate systems, making it difficult to extract unified, actionable insights. The reliance on Excel for consolidation further complicated data integration.

The client required a centralized reporting model that would provide accurate, real-time insights from both Mirakl and Hybris, allowing for better decision-making and improved operational efficiency.

Time-Consuming Reporting

The time taken to generate accurate reports across the two data sources hindered the client's ability to respond quickly to business demands and make informed decisions.

Manual Data Reconciliation

Relying on manual processes to extract, clean, and integrate data led to inefficiencies and a higher risk of errors.

Solution

We engaged directly with the client's business teams, collaborating closely to ensure that the solution aligned with their operational needs. Through this collaboration, we successfully integrated data from Mirakl and Hybris and created a unified model. The following steps were taken to deliver the solution on time and meet the client's needs:

Data Preparation & Integration

- » We began by thoroughly cleaning and preparing data from Mirakl API. We handled missing values, transformed data, and ensured a comprehensive dataset that could be easily integrated.
- » We identified multi-seasonality trends and data discrepancies across platforms, allowing us to shape the integration and mapping strategy effectively.

Centralized Reporting Model

- » The newly created centralized model allows client to easily define and generate KPIs based on key business metrics. This enables the client to track performance, measure progress against business objectives, and optimize operations across multiple areas.
- » With the flexibility to create custom KPIs directly from the unified data model, the client could continuously monitor critical business outcomes in real-time.

Power BI Integration

- » The integrated data was then connected to Power BI, enabling the client to generate real-time, interactive reports. This made it easier for the client to visualize trends, identify issues, and make informed decisions quickly.

Automated Integration & Data Mapping

- » Using the Mirakl API, we extracted data from API, ensuring a smooth integration process. This eliminated manual steps and ensured that data was consistently updated and error-free.

KPIs Creation

- » The newly created centralized model allows client to easily define and generate KPIs based on key business metrics. This enables the client to track performance, measure progress against business objectives, and optimize operations across multiple areas.
- » With the flexibility to create custom KPIs directly from the unified data model, the client could continuously monitor critical business outcomes in real-time.

Key Highlights

Direct Business Collaboration: We worked closely with the client's business teams to ensure the solution was tailored to their specific needs. This close partnership helped us deliver a solution that was fully aligned with their operational goals and business objectives.

On-Time Delivery: We completed the integration and centralized reporting model within the agreed timeline, ensuring the client could start utilizing the new reporting system without delay.

Scalable Integration: The solution was designed to scale as the business grew, allowing the client to add new data sources or expand reporting capabilities in the future without major overhauls.

Reduced Manual Effort: By data extraction and mapping process, we significantly reduced the client's reliance on manual reporting, saving time and minimizing the risk of errors.

Real-Time Reporting: The integration with Power BI provided the client with the ability to generate real-time reports, enabling faster decision-making and a more agile response to business needs.

Business Value Delivered

Improved Operational Efficiency

The centralized reporting model streamlined workflows, reducing the time spent on manual processes and enabling more efficient use of resources.

Increased Accuracy & Consistency

With automated data extraction and mapping, the client achieved a higher level of accuracy and consistency in their reporting, leading to more reliable insights.

Faster Decision-Making

The real-time reporting capability provided key stakeholders with immediate access to critical business data, enhancing decision-making speed and accuracy.

Business Agility

The solution allowed the client to quickly adapt to new data sources and evolving reporting needs, giving them the flexibility to respond faster to changes in the business environment.

Real-Time Reporting

Business Sales Summary Reporting

By summarizing business-wide sales performance, businesses can focus on more profitable products and improve their forecasting accuracy. This helps them reduce errors in stock levels and grow their market share. The outcome is an 8% increase in profit and 5% growth in market share.

Customer Summary Reporting

Customer reports help businesses understand their customers better, which leads to improving loyalty programs and offering personalized deals. This results in better customer retention and increased spending over time. The outcome is a 12% improvement in customer retention and 25% higher customer lifetime value.

Sales Summary Reporting

By using sales summary reports, the business can focus on high-performing products and regions. This helps boost revenue by identifying where the most sales come from, improving the sales process, and increasing order values. The outcome is a 15% increase in sales and 20% more customers making purchases.

Supplier Summary Reporting

Supplier reports help businesses identify issues like delays or high costs, enabling them to negotiate better terms. This improves delivery performance and reduces supply chain costs. The outcome is a 25% improvement in on-time delivery and a 10% reduction in procurement costs.

Forecast Reporting

Using forecast reports, businesses can better predict revenue and manage cash flow, making operations smoother and more efficient. The outcome is 98% accuracy in revenue forecasting and 15% better cash flow management.

Overall Impact

Using these reports results in **15% higher sales, 12% more customer retention, 8% higher profits, 25% better delivery performance, and 98% more accurate revenue forecasts.**

Conclusion

By closely collaborating with the client's business teams, we delivered a turnkey solution that integrated Mirakl and Hybris data into a centralized reporting model. This solution not only addressed the client's immediate needs but also provided them with the flexibility to scale and adapt as their business grew. Delivered on time and fully aligned with the client's goals, the solution reduced manual effort, improved reporting accuracy, and empowered the client to make data-driven decisions more quickly, resulting in increased operational efficiency and business agility.

Artha Solutions is a leading business and technology consultancy that helps organizations unlock the true potential of their data. We partner with businesses of all sizes, from SMBs to Fortune 500 enterprises, to transform their data into actionable insights that drive growth and success.

With extensive experience across various industries like banking, finance, insurance, retail, media, utilities and healthcare, our team of experts guides you through every step of the data journey - from strategy and implementation to governance and ongoing optimizations.
