

Enhancing Data Governance & GDPR Compliance for a Leading Global Hospitality Provider

A global hospitality provider partnered with Artha Solutions to enhance data governance, ensure GDPR compliance, and improve customer data management. Facing challenges with structured/unstructured data, regulations, and security, they streamlined data requests, improved privacy, and reinforced compliance using automation, data lineage tracking, and role-based security.

Outcomes

98%

Of customer data requests processed within the required GDPR timeline.

50%

Reduction in manual effort for personal data identification and risk assessment.

99.9%

Achieved 99.9% accuracy in data classification, anonymization, and GDPR compliance.

40%

Improved data security by 40%, reducing unauthorized access and breaches.

100%

Achieved 100% GDPR compliance, closing gaps in privacy policies and enforcement.

Challenges

As a large-scale hospitality provider, the company encountered critical data governance and privacy challenges:

Data Access and Anonymization

Implementing secure data access controls and ensuring the ability to erase or anonymize customer data upon request.

Expanded Regulatory Scope

Inspecting all data sources to identify, protect, and categorize personal data under GDPR requirements.

GDPR Compliance and Risk Mitigation

Building a real-time inventory of personal data to evaluate privacy risks and enforce compliance policies.

Complex Data Landscape

Managing structured and unstructured personal data across traditional data warehouses, Hadoop clusters, and various internal systems.

Solutions Provided

GDPR-Compliant Data Governance Framework

Created a GDPR data map to visualize information flows and implemented a structured governance framework with defined privacy rules and compliance enforcement.

Automated Data Discovery and Classification

Implemented automated tools to categorize personal data, track customer requests in real-time, and ensure efficient auditing and compliance reporting for structured and semi-structured fields.

Secure Data Access and Anonymization Controls

Implemented role-based security to ensure only authorized personnel access personal data based on user groups and usage context, while enabling customer data anonymization to fully erase or mask personal details upon request.

Scalable Data Retention and Privacy Management

Implemented data encryption and anonymization to safeguard personal data at all stages, while establishing a secure audit trail to track data access, modifications, and anonymization requests.
