

Transforming IT Infrastructure: A Cloud Migration Journey for HomeServe

A global leader in emergency home repair and improvement services, embarked on a strategic digital transformation journey to modernize its IT infrastructure. By migrating Talend Data Management to the cloud, the company aimed to achieve significant cost savings, improved operational efficiency, improved remote accessibility, and enhanced scalability. The transformation has positioned HomeServe to respond swiftly to market demands while maintaining high service standards.

Outcomes

25%

The processing time was reduced by an average of 25%, significantly enhancing operational efficiency.

30%

There was a 30% reduction in operational costs and IT expenditures, reflecting the economic benefits of the cloud migration.

45%

Improvement in data processing efficiency, significantly reducing job execution times and enhancing service delivery.

90%

Automation of administrative processes, minimizing manual intervention and improving operational accuracy.

Challenges

- Ensuring a seamless transition from on-premises to cloud without disrupting business operations.
- Optimizing resource allocation to balance performance and cost.
- Managing integration between Talend Cloud, AWS, and on-premises applications.

Solutions Provided

Automation and Optimization of Cloud Operations

Migrated critical data management components to Talend Cloud, reducing dependency on legacy systems, while implementing AWS autoscaling to dynamically adjust Talend execution server capacity based on utilization and automating migration of administrative modules, including user and project management, to streamline processes.

Governance and Security Enhancement

Established secure communication protocols, including firewall configurations and IP whitelisting, integrated Okta Single Sign-On (SSO) for enhanced identity management and access control, and automated log archival to Amazon S3 for improved monitoring and audit readiness.

Improved System Performance and Scalability

Conducted extensive non-functional testing to ensure cloud-based infrastructure could handle varying workloads, while automating deployment and promotion of artifacts to higher environments using Talend Cloud Management Console APIs. with uncompromised quality and accuracy.
