

Optimizing Customer Data Management for a Global Fragrance Manufacturer

A leading perfume manufacturer struggled with fragmented customer data across various sources. The company partnered with Artha Solutions to implement a Master Data Management (MDM) system and used the Dynamic Ingestion Framework (DIF) to streamline data integration. This solution centralized, cleansed, and unified customer data, enabling seamless access and improving operational efficiency.

Outcomes

99.7%

Achieved 99.7% data accuracy by eliminating duplicates and enhancing customer record reliability.

50%

Automated cleansing and integration accelerated customer data processing by 50%, reducing manual efforts.

40%

Business teams gained instant access to unified customer insights, increasing data accessibility by 40%.

30%

Standardized records enhanced decision-making and analytics, improving reporting accuracy by 30%.

20%

Ensured data integrity and governance, reducing compliance risks by 20% across systems.

Challenges

Dispersed Customer Data & Data Silos

Customer records were scattered across multiple systems, including SAP and external files, lacking a centralized repository, making data consistency across teams difficult to maintain.

Limited Accessibility & Governance

Business users lacked easy access to customer insights, affecting decision-making and engagement, necessitating a structured data governance framework for accuracy and compliance.

Poor Data Quality & Duplication Issues

Duplicate and inconsistent customer records caused operational inefficiencies and poor reporting accuracy, while teams struggled to validate, cleanse, and standardize data across systems.

Solutions Provided

Centralized Master Data Management (MDM) System

Standardized and consolidated customer records from SAP and 30+ tables, creating a single source of truth by eliminating redundant and inconsistent data.

Data Quality & Governance Enhancement

Implemented automated deduplication, cleansing, and validation to ensure high-quality customer records, while enabling secure, role-based access and governance controls for all teams.

Dynamic Ingestion Framework (DIF) for Data Integration

Integrated customer data from Excel, flat files, and external sources, implementing automated ingestion and cleansing to enhance data accuracy and consistency.
