

Think Data, Think Artha.

CASE STUDY

Data Governance & Master Data Management

Transforming Data Governance for a Leading Energy Provider: An MDM Success Story

A Canadian energy provider partnered with Artha Solutions to improve data governance and MDM. Facing fragmented data, they sought a unified approach. Artha helped streamline data management for customers, suppliers, and finance, enhancing decision-making and efficiency.

Outcomes

45%

Improvement in data accuracy, reducing errors in financial transactions and reporting.

50%

Reduction in manual data reconciliation efforts, streamlining operations.

30%

Faster data processing, enhancing real-time access to customer, supplier, and financial records.

60%

Expanded MDM coverage by 60%, integrating additional business units and locations.

Challenges

As a global energy provider, the firm encountered key data governance challenges.

Data Fragmentation

Aggregating customer, supplier, and product data from multiple internal systems.

Scaling MDM Capabilities

Expanding Master Data Management (MDM) to include locations, partners, GL accounts, and equipment.

Complex Financial Modeling

Developing party and counterparty models to support financial netting processes.

Solutions Provided

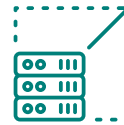

Standardized Data Management Framework

Designed template-based data modeling for party and counterparty data, including the establishment of golden record creation using de-duplication rules to maintain accurate records.

Data Quality Enhancement and Security Governance

Implemented automated data validation and quality checks for real-time error resolution and ensured role-based security, allowing controlled access to sensitive financial and operational data.

Process Optimization for Future Scalability

Created a persistent data store for historical tracking, auditing, and compliance reporting, while developing an MDM roadmap for future scalability, supporting new business units and integrations.

Scalable MDM Architecture for Enterprise-Wide Integration

Deployed a comprehensive MDM solution to integrate and manage critical data domains, expanding MDM capabilities to cover suppliers, locations, and financial transactions.
