Student Onboarding to Academic Monitoring: Accelerating Data Synchronization & Operational Efficiency

A prestigious independent school, faced challenges in managing student data across multiple applications, including Slate, Blackbaud Education Management (BBEM), and Orah. The integration of these platforms required a seamless flow of information while maintaining data accuracy and consistency. Artha Solutions enabled real-time data synchronization via automated Talend ETL pipelines for enhanced operational efficiency and student information management.

Outcomes

40%

Automated ETL pipelines boosted data processing efficiency by 40%, speeding student onboarding.

30%

Standardized data checks reduced errors by 30%, improving accuracy across platforms.

50%

Automated logging and error handling mechanisms improved Error Resolution Speed by 50%.

20%

Seamless integration between the applications enabled 20% enhancement in stakeholder communication.

Challenges

Fragmented Data Flow

Multiple applications (Slate, BBEM, Orah) operated in silos, requiring manual data consolidation.

Delayed Data Updates

Lack of automation resulted in slow updates to student enrollment, attendance, and parent information.

Error-Prone Processes

Manual data entry and API failures led to inconsistencies in student and parent records.

Limited Visibility & Monitoring

No centralized system for tracking data movement and error resolution.

Solutions Provided

Real-time Data Sync

Built a seamless integration between Slate and BBEM to maintain real-time data synchronization, enabling quick decision-making and improved operational efficiency.

Robust Error Handling

Integrated error-handling mechanisms, capturing failures and ensuring uninterrupted workflows.

Efficient API Pipeline

Built a pipeline which handles paginations of the APIs and applies parallel processing where applicable to increase the performance.

Standardized Quality Checks

Improved data accuracy and consistency through standardized transformations and quality checks.
