

ETL Modernization and Live Logistics Analytics with Qlik Cloud

Client Profile:	Global Automotive Parts Manufacturer	Industry:	Manufacturing
Region:	Global / Europe	Solution Area:	Real-time Logistics Analytics & ETL Modernization
Technologies:	Qlik Cloud, Qlik Replicate, Qlik Compose, Snowflake, Microsoft Azure	Date:	April 2026

Business Challenge

A global manufacturer of automotive assemblies suffered from severe inventory latency. Logistics and inventory events from legacy databases took over 24 hours to sync to the executive BI system. This latency led to frequent delays, stockouts, shipping bottle-necks, and a total lack of real-time tracking for hot orders. The manual ETL pipelines in place required frequent overnight maintenance, causing data outages.

Solution Delivered

Artha Solutions migrated the legacy ETL workflows to Qlik Cloud, designing a modern Change Data Capture (CDC) streaming pipeline. Using Qlik Replicate, transaction logs are read in real-time and streamed directly to a Snowflake warehouse hosted on Microsoft Azure. Qlik Compose was utilized to dynamically model warehouse schemas and automate data mart creations without writing complex SQL.

Implementation Approach

We audited 150 legacy ETL pipelines and mapped target schemas. We then deployed Qlik Replicate CDC tasks, set up automated schema generation in Qlik Compose, and designed live dashboards displaying key warehousing indicators, shipping statuses, and inventory routing metrics.

Business Outcomes

Logistics latency dropped from 24 hours to under 2 minutes, enabling active intelligence. Operations managers can now dynamically redirect shipments to avoid delays. The system automatically handles pipeline exceptions, resulting in zero overnight maintenance outages.

Key Result Metrics

Key project milestones include: 65% faster inventory reporting cycles, 90% automated ETL code migration from legacy systems, 30 million database transactions replicated daily, and over USD 1.2 million in annual logistics savings achieved by eliminating shipping delays.

Executive Quote

"By transitioning our pipelines to Qlik Cloud, Artha enabled real-time logistics analytics that saved millions in shipping delays and completely eliminated overnight pipeline overhead."
