

Think Data, Think Artha.

CASE STUDY

Talend and Azure

Enhancing Recruitment with Unified Talent Analytics

A leading healthcare provider struggled with inefficient talent acquisition. Artha Solutions built a Unified Talent Analytics Platform on Azure Cloud using Talend. This solution addressed data silos and inconsistencies, streamlined hiring, improved data quality, and enabled data-driven decisions.

Outcomes

40%

Reduction in data errors across all talent acquisition systems within the first six months.

30%

More accurate reports, leading to more reliable and data-driven hiring decisions.

38%

Reduced the average time to fill vacancies from 45 days to 28 days—a 38% improvement.

50%

Cut the average time to contact candidates by 50%, from 4 days to just 2 days

40%

Handled a 40% increase in job requisitions without additional infrastructure costs.

Challenges

Fragmented Data Sources

Multiple systems for hiring and HR management resulted in siloed and uncoordinated data.

Inconsistent Data Formats

Variations in data from internal and third-party platforms hindered reporting accuracy.

Data Quality Issues

Inconsistent and incomplete data made it challenging to generate reliable insights and KPIs.

Inefficient Hiring Processes

Slow recruitment cycles impacted the ability to fill vacancies promptly, risking client satisfaction.

Solutions Provided

Unified Data Architecture

Consolidated data from various systems into a single, standardized format for streamlined analysis.

KPI Dashboards

Developed dashboards to track critical metrics like Time to Fill, Acceptance Rates, and New Hires.

Data Cleansing and Standardization

Implemented automated processes with Talend to improve data accuracy and consistency.

Scalable Cloud Infrastructure

Built a flexible platform on Azure Cloud to support real-time integration and future growth.
