

Think Data, Think Artha.

## CASE STUDY

### Customer 360

# Transforming Guest Experiences through Data Modernization for a leading Cruise Line

A leading cruise vacation company, operating across 270+ destinations globally, partnered with Artha Solutions to embark on a transformative journey of data modernization. The goal was to consolidate fragmented guest data, enable advanced analytics, and elevate customer experiences, driving loyalty and revenue growth.

## Outcomes

**10X**

Improvement in ETL/ELT speed

**90%**

Improved data cleansing efficiency

**Customer 360**

Created comprehensive Customer 360 view

**\$2 Million**

Saved \$2 million through platform consolidation and operational efficiency

## Challenges

### Data Consolidation

Managing and integrating data from multiple diverse sources, such as message queues, Parquet files, and traditional databases, to create a unified view of each guest.

### Data Quality Issues

Ensuring data accuracy and preventing the influx of "garbage" values that could compromise analytics and machine learning outcomes.

### High Volume, Velocity, and Variety

Dealing with terabytes of data from various sources while ensuring timely processing to support decision-making and customer service.

### Technology Constraints

Addressing the limitations of existing data platforms, which struggled to handle high-speed, high-volume processing.

## Solutions Provided

### Advanced Data Platforms

Leveraged Talend and Snowflake for seamless integration and cost-effective data management.

### Optimized Data Integration

Implemented Talend ELT pushdown to utilize Snowflake's high-performance computing engine.

### Dynamic and Scalable Jobs

Created dynamic SQL jobs using Talend's Native Code Generator for execution on the Snowflake Cloud Platform.

### Enhanced ETL Processes

Optimized Spark batch and streaming jobs, incorporating automated data validation and cleansing processes to ensure high-quality analytics-ready data.
