

Driving Operational Excellence with Data Insights Platform

Artha Solutions partnered with a Philippine telco, implementing a robust DIP (Data Insights Platform). This streamlined data quality, enhanced traceability, and optimized KPI management, empowering the provider to improve efficiency, customer satisfaction, and data-driven decision-making.

Outcomes

50%

Reduction in data processing time, enabling faster and more accurate reporting.

40%

Improvement in data traceability, reducing delays in resolving data discrepancies.

30%

Improved data quality for better insights and operational efficiency.

35%

Increased accuracy of KPI reporting by 35%, driving optimized product mix and revenue growth.

20%

Boost in customer satisfaction through improved data-driven personalization and service delivery.

Challenges

As one of the largest mobile networks in the Philippines, the operator faced several data challenges.

Managing Large Data Sets

Processing and integrating vast amounts of subscriber data in real time to ensure readiness and accuracy.

Traceability Issues

Difficulty in tracking critical data elements back to their sources, causing delays in issue resolution and impacting operational efficiency.

Identifying Priority KPIs

Aligning key business metrics with strategic goals to derive actionable insights for decision-making.

Solutions Provided

Data Quality Automation and Trust Metrics

Implemented daily data quality monitoring with Artha's Data Insights Platform (DIP), automating data cleansing and transformation to ensure consistency across customer, billing, and call records.

Enhanced Data Lineage and Traceability

Developed a Data Catalog for lineage tracking and impact analysis, integrating metadata for regulatory compliance and PII auto-tagging in OneTrust reporting.

Data Governance Framework and KPI Optimization

Established a data governance framework with a business glossary, semantic mapping, and lineage tracking, aligning KPIs with business goals to enable data-driven decision-making and performance optimization.

Scalable Big Data Processing for Performance Optimization

Processed large data sets with a Big Data platform and Oracle database, improving data ingestion and analysis, while integrating billing and call records for Telco business metrics.
